PROFESSIONAL SUMMARY

Aspiring Data Visualization Professional Skilled in transforming complex datasets into actionable insights using Microsoft Power BI, Tableau, Microsoft Excel, and Python in environments such as Google Colab Proficient in data cleaning, exploratory data analysis, and building interactive dashboards and reports Focused on data storytelling, statistical analysis, and deriving insights to support data-driven decision-making through practical projects.

EDUCATION

Bachelor of Technology (Artificial intelligence)	2024 - 2028
Newton School of Technology, Rishihood University	Grade: 7.8/10.0
Intermediate (Class XII)	2023 - 2024
Divine Light International School, Sirhind	Grade: 75.0%
Matriculation (Class X)	2021 - 2022
D.A.V. Public School BRS Nagar, Ludhiana	Grade: 90.0%

PROJECTS

FlowSync ([Github](#)) April 2026

FlowSync is a Python-based traffic simulation project designed to model and analyze real-world traffic dynamics through a modular and extensible software architecture. At its core, the project focuses on simulating how individual vehicles behave, interact with one another, and respond to traffic control systems such as signals, intersections, and road rules. The goal is to create a flexible framework that not only supports realistic traffic scenarios but also allows developers to easily extend and customize different components of the system.

Synora ([Github](#)) March 2026

An AI-powered system for EV infrastructure planning that uses machine learning, geospatial data, and real-time traffic insights to optimize charging station placement and scaling. It analyzes vehicle density, travel patterns, energy demand, and urban growth to predict future needs, integrates IoT and user data, and enables scenario simulations for cost-effective, sustainable decision-making.

Zomaana ([Github](#)) March 2026

On restaurant platforms like Zomato, only a few restaurants capture most of the customer attention, making it challenging for mid-level and new restaurants to grow and get noticed. This project analyzes a comprehensive dataset to understand the key drivers of customer ratings, engagement, and pricing. The insights aim to guide strategies for better visibility and optimize platform efficiency in the highly competitive food industry.

SteamBoard ([Github](#)) February 2026

This project analyzes how pricing models, content structure, platform accessibility, and user feedback influence **game popularity, engagement, and player satisfaction** on the Steam marketplace.

The analysis combines exploratory data analysis, feature engineering, KPI design, and dashboarding to uncover market concentration patterns, engagement drivers, and discovery dynamics across Free-to-Play and Paid games.

SKILLS

Computer Languages: Machine Learning, Python, SQL

Data Tools: NumPy

Software Packages: Pandas, Excel, MySQL, MongoDB

Soft Skills: Teamwork

Others: Spreadsheet, Tableau, Problem-Solving, Analytics, Matplotlib seaborn, Git and Github
